

GENDER DYNAMICS IN HEALTH INTERVENTIONS

WEBINAR BY DR ELIZABETH WAMERA, WASH SPECIALIST AT UNICEF WEST & CENTRAL AFRICAN REGION

Most health development initiatives are designed with the thought of reaching the masses to improve the general health and wellbeing. Unfortunately, what is considered masses, communities, citizens, societies or patients are intricately stratified due to the gender dynamics that greatly affect the quality of the process, outcomes and impacts of the health development intervention. One of the most effective ways of ensuring no one is left behind is to appreciate the various gender dynamics that exist in each and every facet of the various health interventions being promoted.
